

CYCLE BILLING AND REFILLS

Do less, accomplish more.

RxCatalyst can help you automate your entire cycle billing and refilling processes. You no longer have to do your bills and refills manually whether they are one-time or scheduled.

This service can help you:

- Speed up the cycle billing and refilling processes.
- Accommodate more refill requests in a day.
- Take care of refilling and billing processes at the same time.
- Increase work efficiency.
- Address a patient's varying needs.
- Minimize billing and refilling oversights.

HERE'S WHAT WE CAN DO:

Automate Your Operations

After we set automatic billing and refilling schedules for regular prescriptions, our remote staff can help you reduce errors and also cater to multiple patients at the same time.

Bill and Refill by Bulk

With the pharmacy software's Auto Fill and Auto Process features, we can bill and refill multiple cycle medications in one go.

Customize Billing and Refilling Schedules

We can bill and fill prescriptions for your regular patients according to your pharmacy's preferred monthly schedule.

Keep Track of Refills

Our remote staff monitor each patient's refill information. We check how many refills are necessary, whether or not the refills are needed, and when the refills should be done.

There's more to us than this!
